

A photograph showing a woman from behind, holding a young child. They are both looking out at a field of wind turbines under a bright, hazy sky at sunset or sunrise. The sun is low on the horizon, creating a warm, golden glow. The woman's arms are raised, and the child's arms are also raised, suggesting a sense of joy and connection to the clean energy landscape.

Clean Power Alliance is Southern California's local clean energy provider

Clean Power Alliance (CPA) is a publicly owned not-for-profit electricity provider, offering clean energy choices at competitive rates. We serve more than three million residents and businesses across 35 communities in Los Angeles and Ventura counties. **We are the number one green energy provider in United States!**

You become eligible for CPA services when your city or county becomes a CPA member and selects a preferred energy option for residents and businesses. Once service launches, you become a CPA customer without having to take additional action. CPA customers always have the power of choice to select the energy option that is best for them or opt out of CPA service and select another electricity provider.

Energy options

CPA offers three energy options designed to meet the diverse needs of our customers:

100% renewable energy

50% clean energy

40% clean energy

Our customers have avoided more than 10 billion pounds of harmful greenhouse gas emissions by choosing clean energy options.

CPA is different from other electricity providers

CPA is one of 25 Community Choice Aggregators (CCAs) across California. CCAs provide consumer choice, competition and innovation, local control, and tools for climate action and resilience.

CPA is governed by a board of directors made up of local elected officials from each of the 35 communities we serve. CPA is a public not-for-profit organization rather than investor-owned, and our board meetings are open to the public. Our net revenues are invested directly into the communities we serve to strengthen critical infrastructure, fund energy and cost saving programs for customers, and train the workforce for green economy jobs.

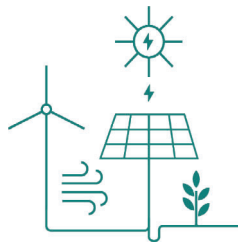

Power sources

Clean Power Alliance secures clean power from sources including wind, solar, small hydroelectric, and geothermal to make Southern California communities greener and more sustainable. Our diverse mix of power sources and extensive battery storage facilities ensure reliable energy supply for our customers and moves us closer to a clean energy future.

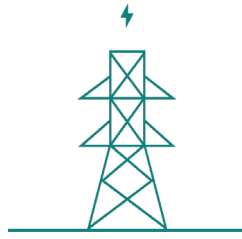

Delivery

CPA purchases clean power (wind, solar, small hydroelectric, and geothermal) and Southern California Edison (SCE) delivers it to your home or business. SCE sends you a single monthly bill which includes SCE charges for electricity delivery and CPA charges for electricity supply/generation. CPA charges are not an added fee — they simply replace the SCE supply/generation charges on your bill.
